

# Reptile or Amphibian?

While amphibians and reptiles are both cold blooded, there are still some important differences! Amphibians spend at least half their lives in water, so they often have webbed feet and sometimes gills. Reptiles usually only live on land (except for turtles) and have scales.

Label each animal below with either reptile or amphibian, then color however you want!

Frog

Chameleon

Turtle

Salamander

Snake

**Frog:** Amphibian **Chameleon:** Reptile **Turtle:** Reptile  
**Salamander:** Amphibian **Snake:** Reptile
