# Make your Own Picasso Portrait

Picasso was famous for taking one person or object, looking at it from different angles, then painting them from all those perspectives at once. Look at a friend or family member and draw them from the front and from the side. Then, using the sheets given, cut out the parts of the pictures and glue them together on the third sheet.

Use this sheet to draw the person from the side.

Use this sheet to combine the front and side view by cutting out parts of your faces and gluing them all together. Be sure to mix and match for the best results!
